

**ESBE Cross-list** New article numbers  
New designations

## New article numbers • New designations

1st of January 2006 ESBE will introduce new article numbers for the whole product range. At the same time the thermostatic and linear products will get new article types and designations.

This is a consequence of that ESBE will implement a new software system for business administration. And that we in the preparatory work have looked over our article structure. All articles have got a unique identity by means of a unique article number, and designations have been more uniform.

This will mean large changes for you, and for ESBE. Our expectations is nevertheless that this will improve and ensure our high quality level and delivery performance.

The cross-list will help you to find the connection between previous article number and new one. You will also find the new article designation. In those cases where no designation is stated, the old one is valid.

Ex Art.no.*	New Art.no.	Ex. Designation*	New Designation
62	1200 01 00	MOTOR 62 24V 2MIN 5NM	
62M	1200 05 00	MOTOR 62 WITH AUXILIARY SWI

## ESBE company – Focusing on motorized valves

ESBE develops, manufactures and markets motorized valves for regulating hydronic systems in small and large buildings. By concentrating on a defined product line we can generate greater strength and increased competence within this field. This makes us specialists with unique knowledge of control units for hydronic systems.

With more than 60 years of experience, we have sound knowledge of development and manufacture of products within heat regulation and our aim is to continually improve

both products and our company. We strive to offer solutions that provide maximum financial benefit and optimum energy efficiency.

Our attitude is that a product does not necessarily have to be ugly, unwieldy and difficult to handle just because it is tucked away in a corner somewhere. On the contrary, we focus on design. We want to make the products both aesthetically pleasing and simple to use.

### ESBE rotary motorized valves

Our broad range of mixing valves for regulating heating / cooling systems are available in a number of different designs. We also offer a range of actuators for simple and compact assembly on the valve. These can be supplied as complete control units, thus guaranteeing safe and problem-free operation year after year.

### ESBE linear motorized valves

Our linear valves with innovative and unique solutions are based on comprehensive development. In practice this leads to high regulating precision, with quiet, reliable function and efficient energy use. Together with our actuators this provides a complete, easy-to-install combination that is optimally suited to your application.

### ESBE thermostatic valves

Our world-class thermostatic valves have been developed to satisfy the very highest design and performance demands. The valves are used in tap water, floor heating and solar heating systems, as well as other applications with high demands for safe and precise regulation.

## More information on ESBE's web site

Find out more about us and our products on our web site, [www.esbe.se](http://www.esbe.se). Here you will find our product catalogues plus contact information for all our offices and representatives.

You can also download tools such as ESBE dimensions, our calculation program for determining the correct valve.
